

WINDOWS XP SETUP INSTRUCTIONS

- Click on the **Start** button and choose **Control Panel**.

- Click **Network and Internet Connections**.

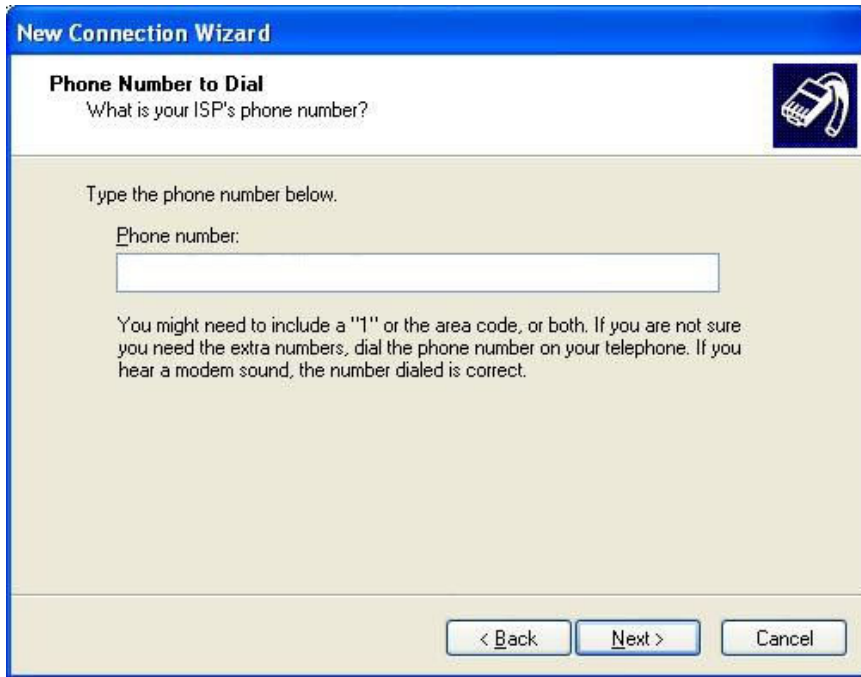

- **Click Set up or change your Internet connection.**

- Click **Add**.

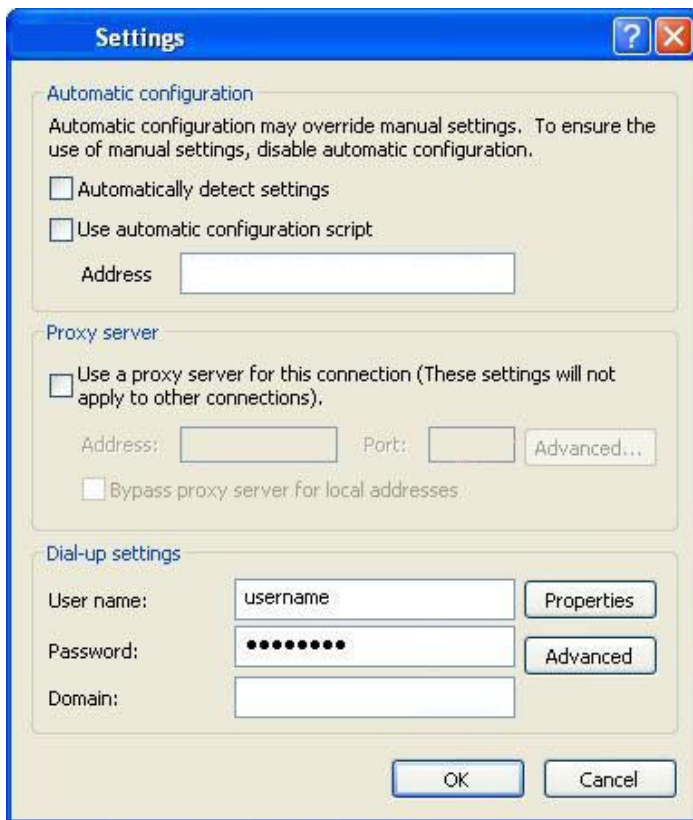

- Choose **Dial-up to private network** and click **Next**.

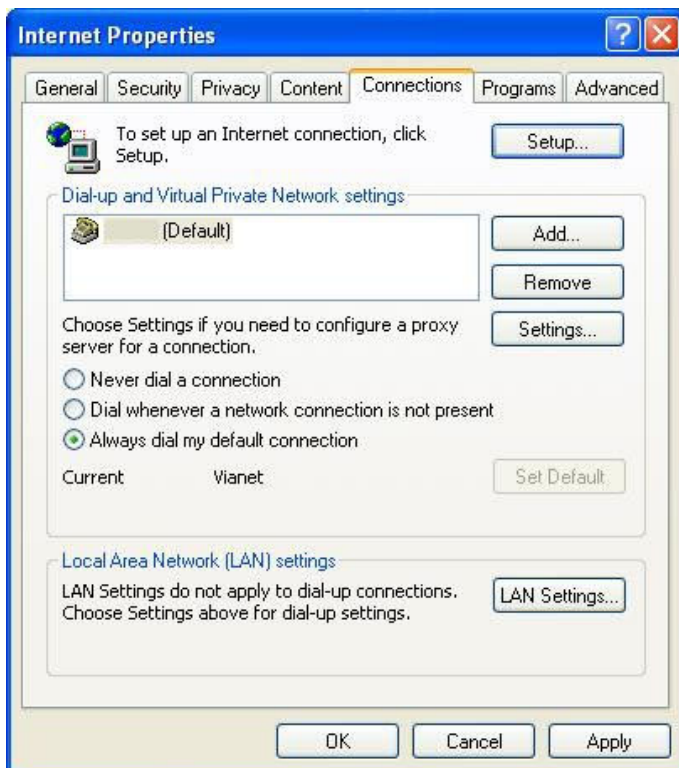

- In the **Phone number** field, enter the local telephone number
- Then click **Next**.

- Name the connection as **Connectto** and click **Finish**.

- Enter your username in the **User name** field. ***NOTE- your username will be similar to this for the dial up connection: yourname#gct@e.56k.cc**
- You can enter your password in the **Password** field or leave it blank. If you choose to leave it blank, you will be requested for your password each time you connect to the internet.
- Click **OK**.

- Click on the tab labeled **General**.

- Set the address of your homepage by entering **http://members.connectto.net** in the **Address** field.
- Click on **OK**
- You are now ready to connect.
- You can double click on Internet Explorer to get the dial up connection dialog box and click “connect”
